## Contents

*Preface* ..... v

*Preface to Second Edition* ..... vii

**1. Introduction** ..... **1**

1.1 Rubber in Engineering ..... 2
1.2 Elastomers ..... 2
1.3 Dynamic Application ..... 3
1.4 General Design Principles ..... 4
1.5 Thermal Expansivity, Pressure, and Swelling ..... 4
1.6 Specific Applications and Operating Principles ..... 5
1.7 Seal Life ..... 8
1.8 Seal Friction ..... 8
1.9 Acknowledgments ..... 8
1.10 References ..... 9

**2. Materials and Compounds** ..... **11**

2.1 Introduction ..... 13
2.2 Elastomer Types ..... 13
2.2.1 General-Purpose Elastomers ..... 13
2.2.1.1 Styrene-Butadiene Rubber (SBR) ..... 13
2.2.1.2 Polyisoprene (NR, IR) ..... 14
2.2.1.3 Polybutadiene (BR) ..... 15
2.2.2 Specialty Elastomers ..... 15
2.2.2.1 Polychloroprene (CR) ..... 15

This page has been reformatted by Knovel to provide easier navigation.

2.2.2.2 Acrylonitrile-Butadiene Rubber (NBR) ..... 16
2.2.2.3 Hydrogenated Nitrile Rubber (HNBR) ..... 16
2.2.2.4 Butyl Rubber (IIR) ..... 16
2.2.2.5 Ethylene-Propylene Rubber (EPR, EPDM) ..... 16
2.2.2.6 Silicone Rubber (MQ) ..... 17
2.2.2.7 Polysulfide Rubber (T) ..... 17
2.2.2.8 Chlorosulfonated Polyethylene (CSM) ..... 17
2.2.2.9 Chlorinated Polyethylene (CM) ..... 17
2.2.2.10 Ethylene-Methyl Acrylate Rubber (AEM) ..... 18
2.2.2.11 Acrylic Rubber (ACM) ..... 18
2.2.2.12 Fluorocarbon Rubbers (FKM) ..... 18
2.2.2.13 Epichlorohydrin Rubber (ECO) ..... 18
2.2.2.14 Urethane Rubber ..... 18
2.3 Compounding ..... 19
2.3.1 Vulcanization and Curing ..... 19
2.3.1.1 Sulfur Curing ..... 19
2.3.1.2 Determination of Crosslink Density ..... 21
2.3.1.3 Influence of Crosslink Density ..... 22
2.3.1.4 Other Cure Systems ..... 23
2.3.2 Reinforcement ..... 23
2.3.3 Anti-Degradants ..... 25
2.3.3.1 Ozone Attack ..... 25
2.3.3.2 Oxidation ..... 26
2.3.4 Process Aids ..... 28
2.3.5 Extenders ..... 28
2.3.6 Tackifiers ..... 29
2.4 Typical Rubber Compounds ..... 29

This page has been reformatted by Knovel to provide easier navigation.

Acknowledgments ..... 33
Bibliography ..... 33
Problems ..... 34
Answers ..... 34

**3. Elasticity ..... 35**

3.1 Introduction ..... 37
3.2 Elastic Properties at Small Strains ..... 37
3.2.1 Elastic Constants ..... 37
3.2.2 Relation between Shear Modulus *G* and Composition ..... 40
3.2.3 Stiffness of Components ..... 42
3.2.3.1 Choice of Shear Modulus ..... 42
3.2.3.2 Shear Deformation of Bonded Blocks and Hollow Cylindrical Tubes ..... 42
3.2.3.3 Small Compressions or Extensions of Bonded Blocks ..... 44
3.2.3.4 Maximum Permitted Loads in Tension and Compression ..... 46
3.2.3.5 Indentation of Rubber Blocks by Rigid Indentors ..... 47
3.2.3.6 Protrusion of Rubber Through a Hole in a Rigid Plate ..... 49
3.3 Large Deformations ..... 50
3.3.1 General Theory of Large Elastic Deformations ..... 50
3.3.2 Stress-Strain Relations in Selected Cases ..... 51
3.3.2.1 General Relations between Stress and Strain ..... 51
3.3.2.2 Simple Extension ..... 51
3.3.2.3 Evaluation of the Strain Energy Function *W* ..... 52

This page has been reformatted by Knovel to provide easier navigation.

3.3.2.4 Elastic Behavior of Filled Rubber Vulcanizates ..... 54
3.3.2.5 Equi-Biaxial Stretching ..... 56
3.3.2.6 Constrained Tension (Pure Shear) ..... 57
3.3.2.7 Inflation of a Spherical Shell (Balloon) ..... 58
3.3.2.8 Inflation of a Spherical Cavity ..... 59
3.3.3 Second-Order Stresses ..... 60
3.3.3.1 Simple Shear ..... 60
3.3.3.2 Torsion ..... 62
3.4 Molecular Theory of Rubber Elasticity ..... 63
3.4.1 Elastic Behavior of a Single Molecular Strand ..... 63
3.4.2 Elasticity of a Molecular Network ..... 64
3.4.3 Effective Density of Network Strands ..... 66
3.4.4 The Second Term in the Strain Energy Function ..... 66
3.4.5 Concluding Remarks on Molecular Theories ..... 68
Acknowledgments ..... 68
References ..... 68
Problems ..... 70
Answers to Selected Problems ..... 70

**4. Dynamic Mechanical Properties ..... 73**

4.1 Introduction ..... 74
4.2 Viscoelasticity ..... 74
4.3 Dynamic Experiments ..... 78
4.4 Energy Considerations ..... 82
4.5 Motion of a Suspended Mass ..... 82
4.6 Experimental Techniques ..... 87
4.6.1 Forced Nonresonance Vibration ..... 87

This page has been reformatted by Knovel to provide easier navigation.

4.6.2 Forced Resonance Vibration ..... 87
4.6.3 Free Vibration Methods ..... 87
4.6.4 Rebound Resilience ..... 87
4.6.5 Effect of Static and Dynamic Strain Levels ..... 88
4.7 Application of Dynamic Mechanical Measurements ..... 89
4.7.1 Heat Generation in Rubber Components ..... 89
4.7.2 Vibration Isolation ..... 89
4.7.3 Shock Absorbers ..... 90
4.8 Effects of Temperature and Frequency ..... 90
4.9 Thixotropic Effects in Filled Rubber Compounds ..... 94
Acknowledgements ..... 94
References ..... 96
Problems ..... 96
Answers ..... 97

**5. Strength ..... 99**

5.1 Introduction ..... 100
5.2 Fracture Mechanics ..... 100
5.2.1 Analysis of the Test Pieces ..... 102
5.2.2 The Strain Energy Concentration at a Crack Tip ..... 103
5.3 Tear Behavior ..... 104
5.4 Crack Growth under Repeated Loading ..... 109
5.4.1 The Fatigue Limit and the Effect of Ozone ..... 111
5.4.2 Physical Interpretation of $G_0$ ..... 113
5.4.3 Effects of Type of Elastomer and Filler ..... 114
5.4.4 Effect of Oxygen ..... 114
5.4.5 Effects of Frequency and Temperature ..... 116
5.4.6 Nonrelaxing Effects ..... 116
5.4.7 Time-Dependent Failure ..... 117

This page has been reformatted by Knovel to provide easier navigation.

5.5 Ozone Attack ..... 117
5.6 Tensile Strength ..... 121
5.7 Crack Growth in Shear and Compression ..... 122
5.8 Cavitation and Related Failures ..... 125
5.9 Conclusions ..... 126
Bibliography ..... 126
Problems ..... 129
Answers ..... 131

**6. Mechanical Fatigue ..... 137**

6.1 Introduction ..... 139
6.2 Application of Fracture Mechanics to Mechanical Fatigue of Rubber ..... 140
6.3 Initiation and Propagation of Cracks ..... 142
6.3.1 Fatigue Crack Initiation ..... 142
6.3.2 Fatigue Life and Crack Growth ..... 143
6.3.3 Fatigue Crack Propagation: The Fatigue Crack Growth Characteristic ..... 144
6.3.4 Fatigue Life Determinations from the Crack Growth Characteristics ..... 146
6.4 Fatigue Crack Growth Test Methodology ..... 148
6.4.1 Experimental Determination of Dynamic Tearing Energies for Fatigue Crack Propagation ..... 148
6.4.2 Kinetics of Crack Growth ..... 149
6.4.3 Effects of Test Variables on Fatigue Crack Growth Characteristics and Dynamic Fatigue Life ..... 150
6.4.3.1 Waveform ..... 150
6.4.3.2 Frequency ..... 150
6.4.3.3 Temperature ..... 150

This page has been reformatted by Knovel to provide easier navigation.

6.4.3.4 Static Strain/Stress ..... 152
6.5 Material Variables and Their Effect on Fatigue Crack Growth ..... 154
6.5.1 Reinforcing Fillers and Compound Modulus ..... 154
6.5.2 Elastomer Type ..... 156
6.5.3 Vulcanizing System ..... 157
6.6 Fatigue and Crack Growth of Rubber under Biaxial Stresses ..... 158
6.7 Fatigue in Rubber Composites ..... 159
6.7.1 Effect of Wires, Cords, and Their Spacing on Fatigue Crack Propagation ..... 160
6.7.2 Effect of Minimum Strain or Stress ..... 160
6.7.3 Comparison of S-N Curve and Fatigue Crack Propagation Constants for Rubber-Wire Composites ..... 163
6.7.4 Fatigue of Two-Ply Rubber-Cord Laminates ..... 164
6.8 Fatigue Cracking of Rubber in Compression and Shear Applications ..... 165
6.8.1 Crack Growth in Compression ..... 165
6.8.2 Crack Growth in Shear ..... 167
6.9 Environmental Effects ..... 168
6.10 Modeling and Life Predictions of Elastomeric Components ..... 169
6.11 Fatigue Crack Propagation in Thermoplastic Elastomers ..... 170
6.12 Durability of Thermoplastic Elastomers ..... 170
6.13 Summary ..... 172
Acknowledgments ..... 173
References ..... 173
Problems ..... 174
Answers ..... 175

This page has been reformatted by Knovel to provide easier navigation.

**7. Durability ..... 177**

7.1 Introduction ..... 179

7.2 Creep, Stress Relaxation, and Set ..... 180

7.2.1 Creep ..... 181

7.2.2 Stress Relaxation ..... 181

7.2.3 Physical Relaxation ..... 182

7.2.4 Chemical Relaxation ..... 183

7.2.5 Compression Set and Recovery ..... 184

7.2.6 Case Study ..... 185

7.3 Longevity of Elastomers in Air ..... 186

7.3.1 Durability at Ambient Temperatures ..... 186

7.3.2 Sunlight and Weathering ..... 186

7.3.3 Ozone Cracking ..... 187

7.3.4 Structural Bearings: Case Studies ..... 187

7.3.4.1 Natural Rubber Pads on a Rail Viaduct after 100 Years of Service ..... 187

7.3.4.2 Laminated Bridge Bearings after 20 Years of Service ..... 189

7.4 Effect of Low Temperatures ..... 192

7.4.1 Glass Transition ..... 192

7.4.2 Crystallization ..... 192

7.4.3 Reversibility of Low Temperature Effects ..... 193

7.5 Effect of Elevated Temperatures ..... 193

7.6 Effect of Fluid Environments ..... 195

7.6.1 Aqueous Liquids ..... 199

7.6.2 Hydrocarbon Liquids ..... 201

7.6.3 Hydrocarbon and Other Gases ..... 203

7.6.4 Effects of Temperature and Chemical Attack ..... 207

7.6.5 Effect of Radiation ..... 209

This page has been reformatted by Knovel to provide easier navigation.

7.7 Durability of Rubber-Metal Bonds ..... 209
7.7.1 Adhesion Tests ..... 210
7.7.2 Rubber-Metal Adhesive Systems ..... 211
7.7.3 Durability in Salt Water: Role of Electrochemical Potentials ..... 212
7.8 Life Prediction Methodology ..... 214
Acknowledgement ..... 217
References ..... 217
Problems ..... 218
Answers ..... 220

**8. Design of Components ..... 223**

8.1 Introduction ..... 224
8.2 Shear and Compression Bearings ..... 226
8.2.1 Planar Sandwich Forms ..... 226
8.2.1.1 Problem ..... 230
8.2.2 Laminate Bearings ..... 231
8.2.2.1 Problem ..... 231
8.2.3 Tube Form Bearings and Mountings ..... 233
8.2.3.1 Problem ..... 233
8.2.3.2 Problem ..... 236
8.2.4 Effective Shape Factors ..... 237
8.3 Vibration and Noise Control ..... 238
8.3.1 Vibration Background Information ..... 239
8.3.2 Design Requirements ..... 241
8.3.3 Sample Problems ..... 241
8.3.3.1 Problem ..... 241
8.3.3.2 Problem ..... 245
8.3.3.3 Problem ..... 246
8.4 Practical Design Guidelines ..... 249
8.5 Summary and Acknowledgments ..... 250

This page has been reformatted by Knovel to provide easier navigation.

Nomenclature ..... 251
References ..... 251
Problems for Chapter 8 ..... 252
Solutions for Problems for Chapter 8 ..... 253

**9. Finite Element Analysis ..... 257**

9.1 Introduction ..... 259
9.2 Material Specification ..... 260
9.2.1 Metal ..... 260
9.2.2 Elastomers ..... 260
9.2.2.1 Linear ..... 260
9.2.2.2 Non-Linear ..... 265
9.2.3 Elastomer Material Model Correlation ..... 274
9.2.3.1 ASTM 412 Tensile Correlation ..... 274
9.2.3.2 Pure Shear Correlation ..... 274
9.2.3.3 Bi-Axial Correlation ..... 275
9.2.3.4 Simple Shear Correlation ..... 276
9.3 Terminology and Verification ..... 276
9.3.1 Terminology ..... 276
9.3.2 Types of FEA Models ..... 277
9.3.3 Model Building ..... 278
9.3.3.1 Modeling Hints for Non-Linear FEA ..... 278
9.3.4 Boundary Conditions ..... 279
9.3.5 Solution ..... 280
9.3.5.1 Tangent Stiffness ..... 280
9.3.5.2 Newton-Raphson ..... 281
9.3.5.3 Non-Linear Material Behavior ..... 281
9.3.5.4 Visco-Elasticity (See Chapter 4) ..... 281
9.3.5.5 Model Verification ..... 282
9.3.6 Results ..... 282
9.3.7 Linear Verification ..... 283

This page has been reformatted by Knovel to provide easier navigation.

9.3.8 Classical Verification – Non-Linear ..... 283
9.4 Example Applications ..... 287
9.4.1 Positive Drive Timing Belt ..... 287
9.4.2 Dock Fender ..... 288
9.4.3 Rubber Boot ..... 289
9.4.4 Bumper Design ..... 291
9.4.5 Laminated Bearing ..... 293
9.4.6 Down Hole Packer ..... 297
9.4.7 Bonded Sandwich Mount ..... 297
9.4.8 O-Ring ..... 299
9.4.9 Elastomer Hose Model ..... 301
9.4.10 Sample Belt ..... 301
References ..... 304

**10. Tests and Specifications ..... 307**

10.1 Introduction ..... 309
10.1.1 Standard Test Methods ..... 309
10.1.2 Purpose of Testing ..... 309
10.1.3 Test Piece Preparation ..... 310
10.1.4 Time between Vulcanization and Testing ..... 310
10.1.5 Scope of This Chapter ..... 310
10.2 Measurement of Design Parameters ..... 311
10.2.1 Young's Modulus ..... 311
10.2.2 Shear Modulus ..... 313
10.2.3 Creep and Stress Relaxation ..... 315
10.2.3.1 Creep ..... 316
10.2.3.2 Stress Relaxation ..... 316
10.3 Quality Control Tests ..... 317
10.3.1 Hardness ..... 317
10.3.1.1 Durometer ..... 317
10.3.1.2 International Rubber Hardness ..... 318

This page has been reformatted by Knovel to provide easier navigation.

10.3.2 Tensile Properties ..... 319
10.3.3 Compression Set ..... 321
10.3.4 Accelerated Aging ..... 322
10.3.4.1 Aging in an Air Oven ..... 322
10.3.4.2 Ozone Cracking ..... 323
10.3.5 Liquid Resistance ..... 324
10.3.5.1 Factors in Swelling ..... 325
10.3.5.2 Swelling Tests ..... 325
10.3.6 Adhesion to Rigid Substrates ..... 325
10.3.7 Processability ..... 327
10.4 Dynamic Properties ..... 328
10.4.1 Resilience ..... 330
10.4.2 Yerzley Oscillograph ..... 331
10.4.3 Resonant Beam ..... 332
10.4.4 Servohydraulic Testers ..... 333
10.4.5 Electrodynamic Testers ..... 334
10.4.6 Preferred Test Conditions ..... 335
10.5 Tests for Tires ..... 335
10.5.1 Bead Unseating Resistance ..... 336
10.5.2 Tire Strength ..... 336
10.5.3 Tire Endurance ..... 338
10.5.4 High Speed Performance ..... 338
10.6 Specifications ..... 338
10.6.1 Classification System ..... 339
10.6.1.1 Type ..... 339
10.6.1.2 Class ..... 340
10.6.1.3 Further Description ..... 341
10.6.2 Tolerances ..... 342
10.6.2.1 Molded Products ..... 342
10.6.2.2 Extruded Products ..... 344
10.6.2.3 Load-Deflection Characteristics ..... 345

This page has been reformatted by Knovel to provide easier navigation.

10.6.3 Rubber Bridge Bearings ..... 345
10.6.3.1 Function ..... 345
10.6.3.2 Design Code ..... 346
10.6.3.3 Materials Specification ..... 347
10.6.4 Pipe Sealing Rings ..... 348
10.6.4.1 Function ..... 348
10.6.4.2 Materials ..... 349
10.6.4.3 Tensile Properties ..... 349
10.6.4.4 Compression Set ..... 349
10.6.4.5 Low Temperature Flexibility ..... 350
10.6.4.6 Oven Aging ..... 350
10.6.4.7 Oil Resistance ..... 350
10.6.4.8 Closing Remarks ..... 351
References ..... 351
Problems ..... 353
Answers ..... 354

**Appendix: Tables of Physical Constants ..... 357**

**Index ..... 361**

This page has been reformatted by Knovel to provide easier navigation.
